

AMIS Plus Newsletter Nr. 4 – February 2003

Dear Current, Potential AMIS Plus Participants & Sponsors

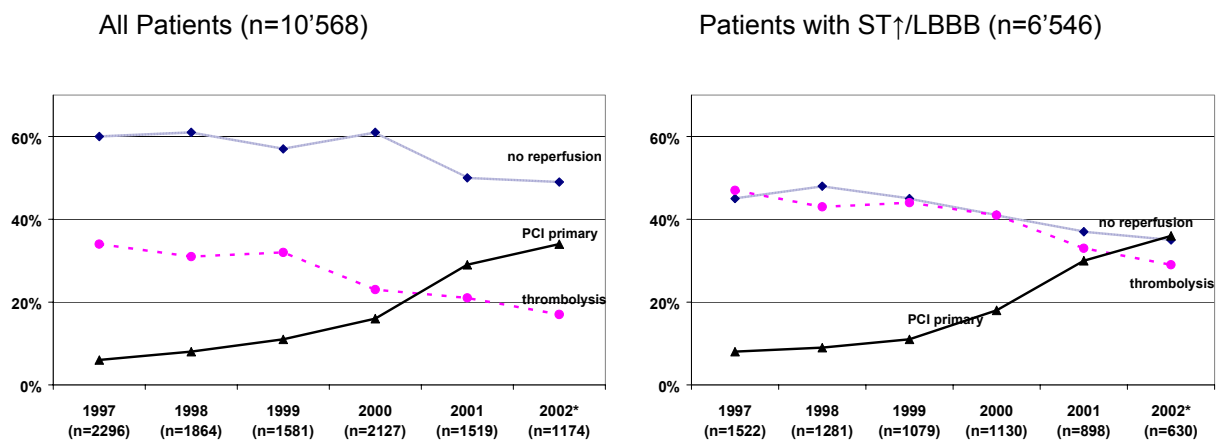

We hope you all enjoyed a good start in this New Year and we would like to especially welcome all our new participants to the AMIS Plus Project.

Manual 2.s is now available!

After completing our new version of the paper questionnaire (Version 2.s), we have now followed-up with the updated version of our manual. In accordance with your wishes German and French versions of the AMIS Plus manual are now available! It can soon be downloaded from our website www.amis.ethz.ch. We look forward to hearing from you if you have any questions or comments.

AMIS Plus Results

Use of reperfusion therapy in all patients and in those presenting with ST segment elevation and/or LBBB

During a six-year period (January 1997 till End of October* 2002), the use of intravenous thrombolytic therapy declined from 34% to 17%, but the use of primary angioplasty increased from 6% to 34%.

Sincerely

For Steering Committee

Paul Erne, Prof., MD
President

For Data Center

Dragana Radovanovic, MD
